

How to Reheat Your Delivery or Pick-Up Meal

Microwave Reheating:

1. Your entrée is packaged in a microwave-safe container. Remove and discard the clear plastic lid from the container.
2. Sprinkle a few tablespoons of water over the food.
3. Place a clean paper towel or sheet of waxed paper over the food in the container.
4. Set the power level to 5 or half-power and set the time for 5 minutes. If you do not have a power level setting, set the cook time for 1 minute and 30 seconds.
5. If your food is not as hot as you would like it to be, continue reheating in 45-second increments until the food is hot enough for your liking.

Reheating Fish or Seafood:

Fish and seafood should not be reheated in the microwave. Instead, these items should be reheated in the stove or toaster oven as follows:

1. Preheat your oven to 275° Fahrenheit.
2. While the oven is heating, transfer food to an oven-proof dish or baking sheet.
3. Add a few tablespoons of water.
4. Cover the dish or baking sheet with aluminum foil.
5. When the oven/toaster oven has reached 275° place the dish or baking sheet in the oven for 8 minutes.
6. If your food is not as hot as you would like it to be, continue reheating in 1 minute increments until the food is hot enough for your liking.

By following the above measures, your reheated food should be warm, moist and ready for you to enjoy.
